

What I Learned -

The windows 10 GUI offers access to various features and programs as well as the start menu.

The 3 key features to know where they live are Control panel, PC settings, and computer management. There are 2 types of users Standard and Admins. You should always run CMD as administrator if you are able to, this will make working in CMD easier. Help in Cmd is a very helpful reference to save time googling command as they are all saved there. There are multiple ways to add new users Either through the GUI or CLI. The difference between a standard user and an administrator is the admin has far greater control over the system, apps, and can manage other user accounts. A standard user has limited access which leads to a more secure environment by limiting their ability to modify the system.

Questions - Answer the questions in Step 2, 3 and 4. Include the original question (copy/paste), followed by your answer. Please document all research and include the sources on the last page and title it 'Sources'. (APA style is not required)

Step 2: Windows GUI (Questions and Tasks)

Please answer the questions below with the steps required to access the feature or function.

Cortana cannot be the answer to these but can be used to find them.

Example: How to make desktop icons large? Right Click on Desktop > Select View > Select Large Icons. This is how to explain step by steps.

1. What is an easy way to open the Action Center?

The Chat Bubble in the bottom right in the taskbar.

2. How do you add a shortcut to a program or file to the desktop?

Right Click the file or program > hover over Send to > Click Desktop

3. How do you personalize the interface (i.e. change background, color, etc.)?

Right Click The desktop > Click personalize

4. How do you access the Settings of the computer (more than one option)?

Right click the Start Button > Click Settings from the Menu. Or Start > Settings

5. How do you access the Administrative Tools (more than one option)?

Start > Windows Administrative tools or Search Windows Administrative tools

6. Where can you adjust the Snap feature?

Start > Settings > System > Multitasking

7. Where are the Disk Management tools?

Right Click Start > Disk Management

8. Where can you run Windows Update?

Start > Settings > update and Security > Windows Update

9. Where can you Add Devices?

Start > Settings > Devices

10. Where can you adjust AutoPlay?

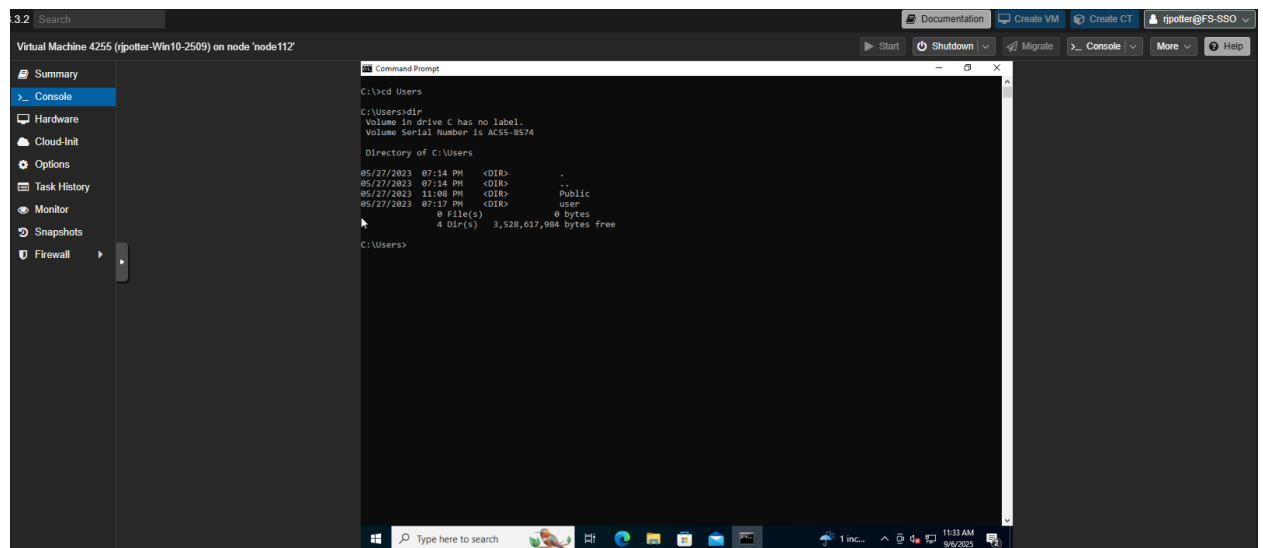

Start > Settings > Devices > Autoplay

11. Where can you access the Resource Monitor?

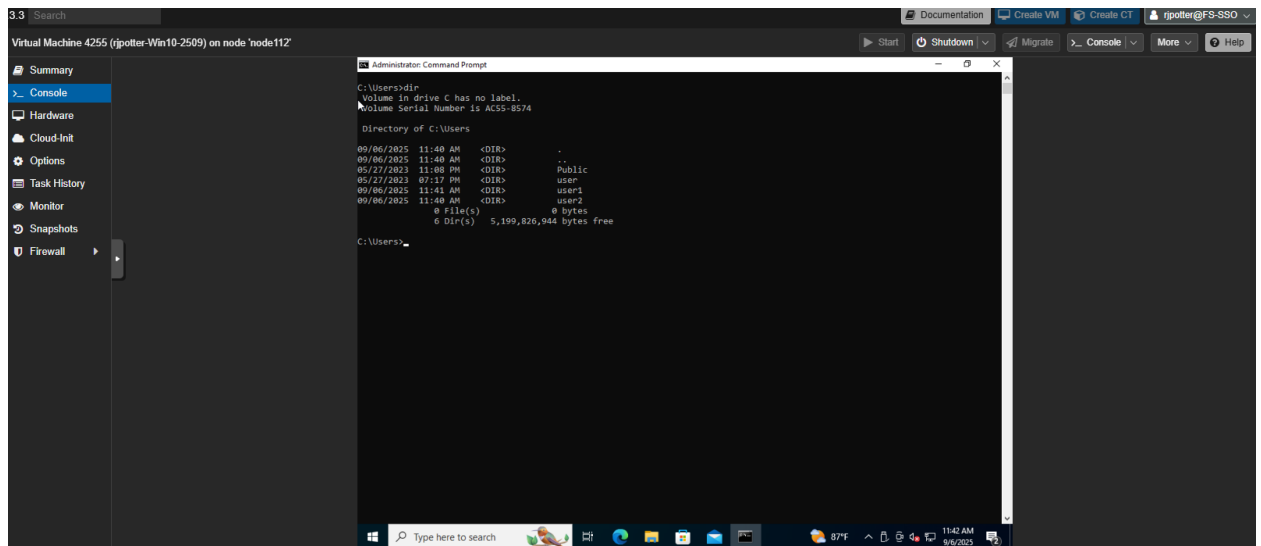

Start > Windows Administrative Tools > Resource Monitor

For the following steps perform the tasks and answer the questions.

1. Go to the User directories located on the C: Drive? (Take a screenshot.)

-
-
3. Create two standard users, User1 and User2, and set the password to FullSail1! for both.
4. Logout as yourself and log in as User 1.
5. Logout as User 1 and log in as User 2.
6. Logout as User 2 and log in as yourself. How many directories are located in the User directory now? (Take a screenshot.)

Step 3: Windows Command Prompt (Questions and Tasks)

1. Access Command Prompt to execute the following commands. (Take a screenshot or document in writing what happened. You may have to use CTL-C to end or exit command.)
2. What does each command display? (screenshot or document in writing)
 - a. TIME
 - b. PATH
 - c. DIR
 - d. TREE

A,B,C, and D

```
Administrator: Command Prompt

C:\>time
The current time is: 12:08:38.68
Enter the new time:

C:\>path
PATH=C:\Windows\system32;C:\Windows;C:\Windows\System32\Wbem;C:\Windows\System32\WindowsPowerShell\v1.0\;C:\Windows\System32\OpenSSH\;C:\Users\user\AppData\Local\Microsoft\WindowsApps

C:\>dir
Volume in drive C has no label.
Volume Serial Number is AC55-8574

Directory of C:\

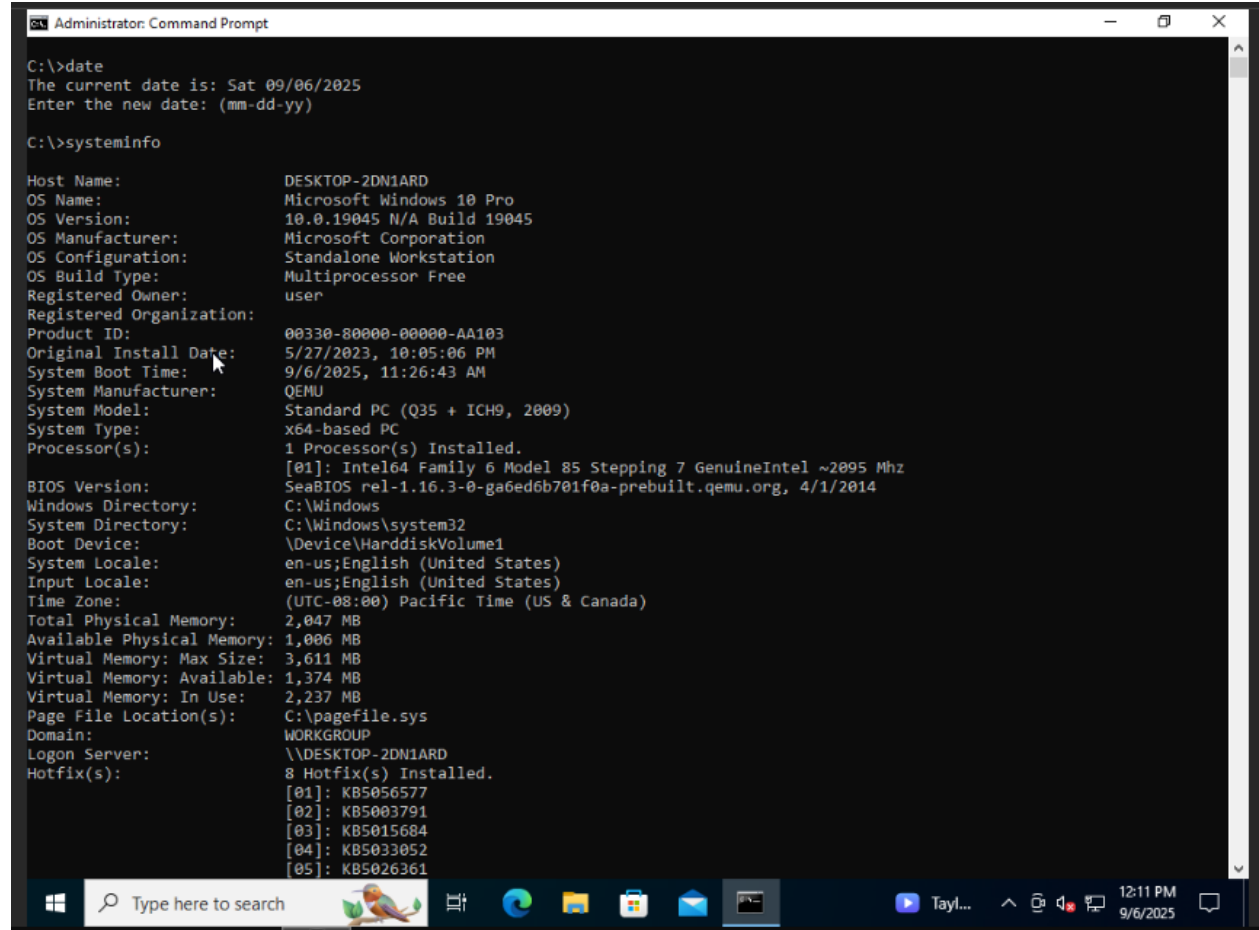

09/06/2025  10:42 AM  <DIR>        happyfile
12/07/2019  02:14 AM  <DIR>        PerfLogs
09/04/2025  10:45 AM  <DIR>        Program Files
10/06/2021  06:57 AM  <DIR>        Program Files (x86)
09/06/2025  11:40 AM  <DIR>        Users
09/06/2025  10:23 AM  <DIR>        Windows
               0 File(s)              0 bytes
               6 Dir(s)  4,892,160,000 bytes free

C:\>tree
Folder PATH listing
Volume serial number is AC55-8574

```

e. DATE

f. SYSTEMINFO

E and F:

A screenshot of a Windows Command Prompt window titled "Administrator: Command Prompt". The window shows the output of the 'date' and 'systeminfo' commands. The 'date' command shows the current date as Saturday, 09/06/2025. The 'systeminfo' command displays detailed system information including host name, OS version, processor details, memory, and installed hotfixes.

```
C:\>date
The current date is: Sat 09/06/2025
Enter the new date: (mm-dd-yy)

C:\>systeminfo

Host Name:                 DESKTOP-2DN1ARD
OS Name:                   Microsoft Windows 10 Pro
OS Version:                10.0.19045 N/A Build 19045
OS Manufacturer:          Microsoft Corporation
OS Configuration:         Standalone Workstation
OS Build Type:              Multiprocessor Free
Registered Owner:          user
Registered Organization:
Product ID:                 00330-80000-00000-AA103
Original Install Date:      5/27/2023, 10:05:06 PM
System Boot Time:           9/6/2025, 11:26:43 AM
System Manufacturer:        QEMU
System Model:               Standard PC (Q35 + ICH9, 2009)
System Type:                x64-based PC
Processor(s):               1 Processor(s) Installed.
                           [01]: Intel64 Family 6 Model 85 Stepping 7 GenuineIntel ~2095 Mhz
BIOS Version:               SeaBIOS rel-1.16.3-0-ga6ed6b701f0a-prebuilt.qemu.org, 4/1/2014
Windows Directory:          C:\Windows
System Directory:            C:\Windows\system32
Boot Device:                 \Device\HarddiskVolume1

                           [02]: KB5003791
                           [03]: KB5015684
                           [04]: KB5033052
                           [05]: KB5026361
```

1. Access Command Prompt and command “HELP” to define the following commands.

(Take a screenshot OR document the definition of each result in your write-up.)

2. What does each command do?

a. XCOPY

```
XCOPY      Copies files and directory trees.
```

b. RD

```
RD          Removes a directory.
```

c. ERASE

```
ERASE       Deletes one or more files.
```

d. REPLACE

```
REPLACE     Replaces files.
```

e. TASKKILL

```
TASKKILL    Kill or stop a running process or application.
```

f. DEL

```
DEL          Deletes one or more files.
```

g. TITLE

```
TITLE        Sets the window title for a CMD.EXE session.
```

h. START

```
START        Starts a separate window to run a specified program or command.
```

i. SHUTDOWN

```
SHUTDOWN     Allows proper local or remote shutdown of machine.
```

j. REN or RENAME

```
REN          Renames a file or files.  
RENAME       Renames a file or files.
```

For the following commands, you will first define each of the commands using the HELP command. Document the definition of each command. (example: dir is a directory)

Then execute the commands at the root of the C: drive (example: C:\>). You may have to navigate to this location. (Take a screenshot of each result.)

1.dir - (What happened?)

```
DIR          Displays a list of files and subdirectories in a directory.
```

2. md info1 - (type dir and enter to see the result)

```
MD           Creates a directory.
MKDIR        Creates a directory.
```

3. cd info1 - (What happened?)

```
CD           Displays the name of or changes the current directory.
```

4. cd\ - (What happened?)

```
CD           Displays the name of or changes the current directory.
```

5. rd info1 - (then type dir and enter to see the result)

```
RD           Removes a directory.
```

6. cls - (What happened?)

```
CLS          Clears the screen.
```

1-4:

```
Administrator: Command Prompt

C:\>dir
Volume in drive C has no label.
Volume Serial Number is AC55-8574

Directory of C:\
09/06/2025  10:42 AM  <DIR>        happyfile
12/07/2019  02:14 AM  <DIR>        Perflogs
09/04/2025  10:45 AM  <DIR>        Program Files
10/06/2021  06:57 AM  <DIR>        Program Files (x86)
09/06/2025  11:40 AM  <DIR>        Users
09/06/2025  10:23 AM  <DIR>        Windows
               0 File(s)              0 bytes
               6 Dir(s)  4,885,114,880 bytes free

C:\>md info1

C:\>dir
Volume in drive C has no label.
Volume Serial Number is AC55-8574

Directory of C:\
09/06/2025  10:42 AM  <DIR>        happyfile
09/06/2025  12:19 PM  <DIR>        info1
12/07/2019  02:14 AM  <DIR>        Perflogs
09/04/2025  10:45 AM  <DIR>        Program Files
10/06/2021  06:57 AM  <DIR>        Program Files (x86)
09/06/2025  11:40 AM  <DIR>        Users
09/06/2025  10:23 AM  <DIR>        Windows
               0 File(s)              0 bytes
               7 Dir(s)  4,885,114,880 bytes free

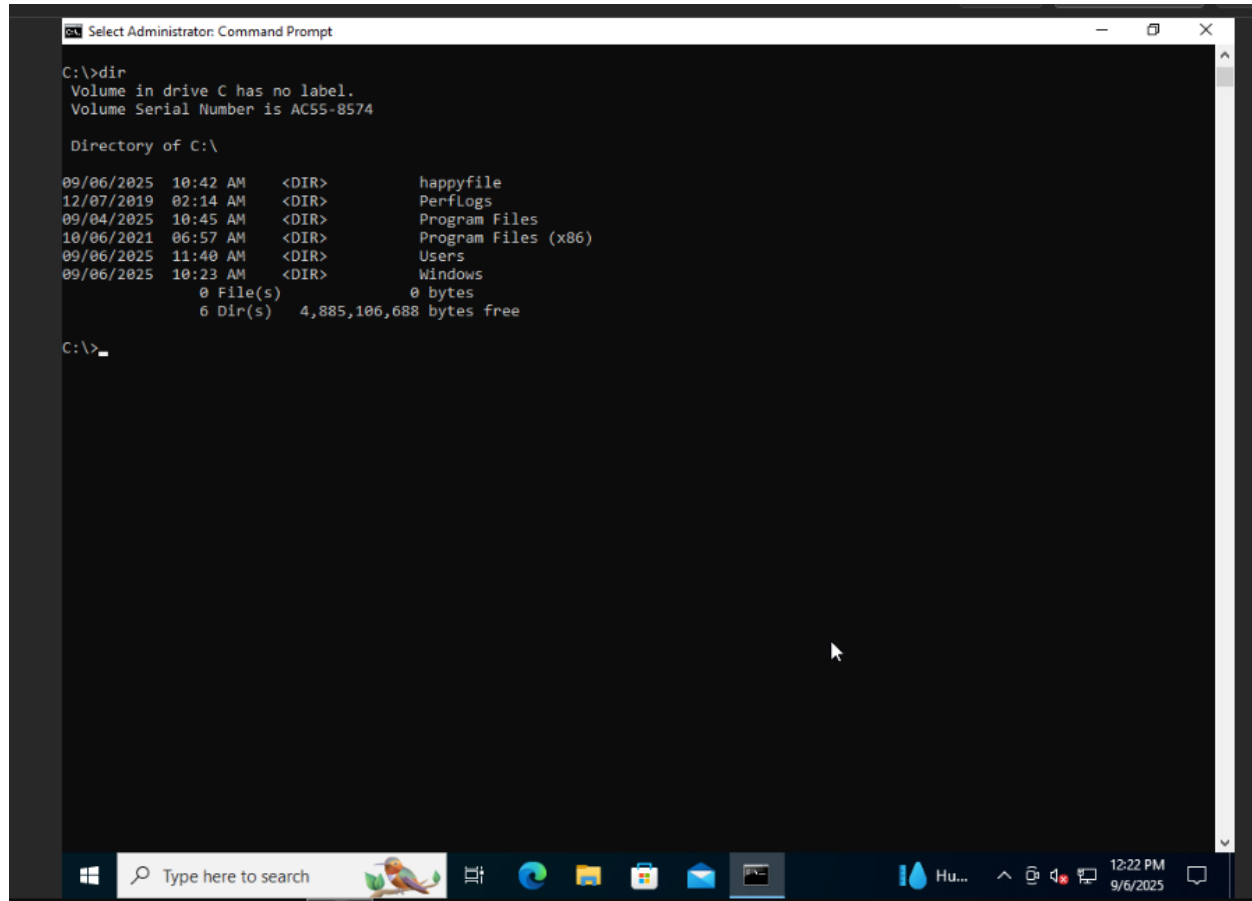

C:\>cd info1

C:\info1>cd/

C:\>rd info1

C:\>dir
Volume in drive C has no label.
Volume Serial Number is AC55-8574
```

5.

The screenshot shows a Windows Command Prompt window titled "Select Administrator: Command Prompt". The command prompt is at the C:\> directory. The user has entered the command 'dir', and the output is as follows:

```
C:\>dir
Volume in drive C has no label.
Volume Serial Number is AC55-8574

Directory of C:\

09/06/2025  10:42 AM  <DIR>        happyfile
12/07/2019  02:14 AM  <DIR>        PerfLogs
09/04/2025  10:45 AM  <DIR>        Program Files
10/06/2021  06:57 AM  <DIR>        Program Files (x86)
09/06/2025  11:40 AM  <DIR>        Users
09/06/2025  10:23 AM  <DIR>        Windows
               0 File(s)              0 bytes
               6 Dir(s)  4,885,106,688 bytes free

C:\>_
```

The taskbar at the bottom of the screen shows the Windows logo, a search bar with the text "Type here to search", and several application icons including File Explorer, Microsoft Edge, and the Task View button. The system tray on the right shows the date and time as 12:22 PM on 9/6/2025.

6.

Step 4: Windows Command Prompt (Questions and Tasks)

Be sure to copy and paste questions 1 – 4 in the “Questions Section” of the write-up. Answer each question with the appropriate details.

1. Why would you want to use the command prompt instead of the GUI?

The main reason for using CLI over GUI is greater automation through scripting, efficiency by executing multiple commands simultaneously, finer control over system operations, and resource conservation, especially on systems without displays or when managing many devices.

2. What are the driver details on your Windows system (Hint* check computer management, and select any driver available)?

Provider? Microsoft

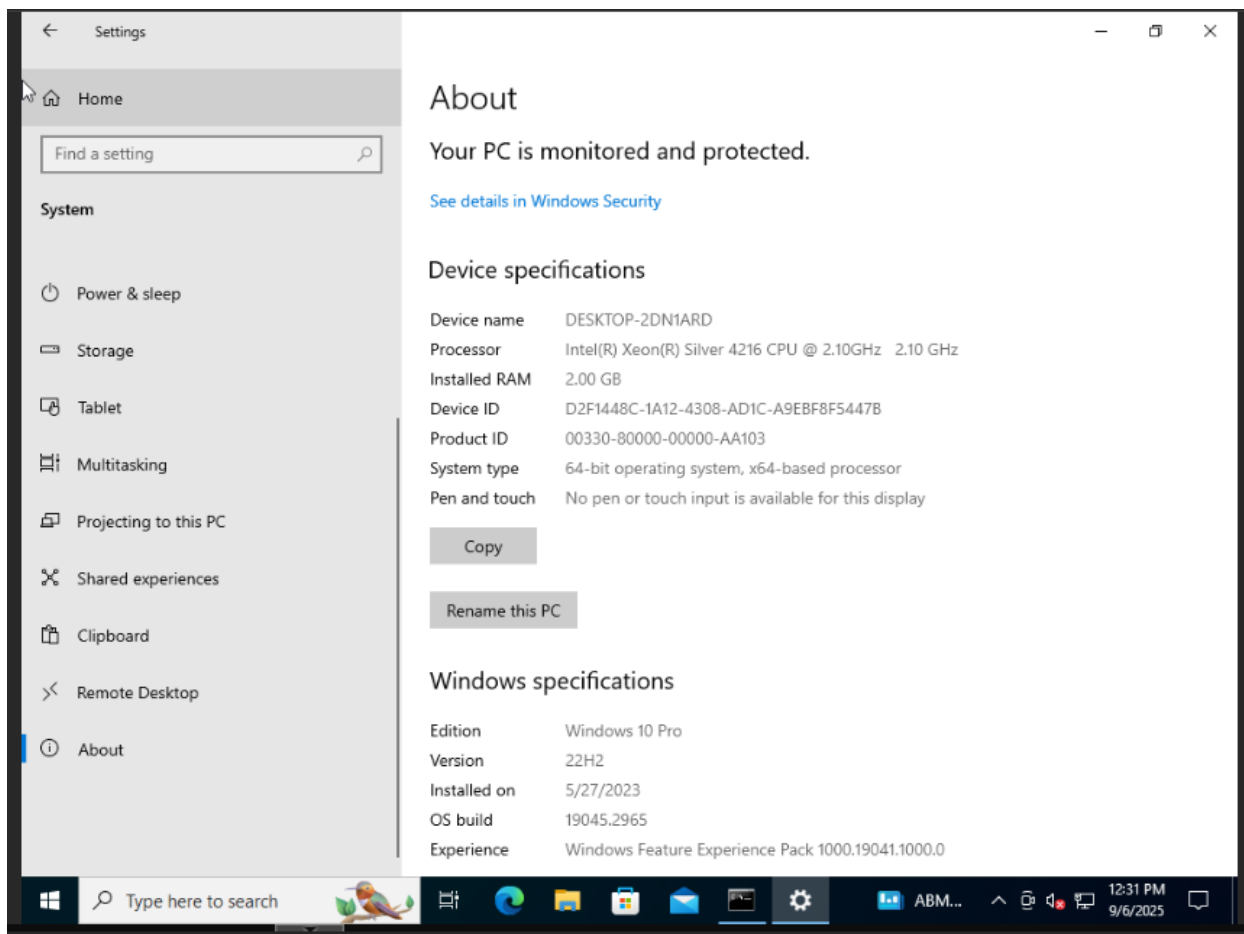

File Version? 10.0.19041.1

Digital Signer? Microsoft Windows

3. Describe how the standard user is different than the administrator.

An administrator user has full control and elevated permissions to modify a system, install software, and manage other user accounts, while a standard user has limited access, primarily for everyday computing, with restrictions on system-level changes to enhance security.

4. Take a screenshot of the Computer information window that displays the following, Windows edition, System, Computer name, etc., and include it in the write-up.
